Subject: Vaccine trials using Dogs - regarding

Sir/Madam,

The CPCSEA in its 101st meeting has recommended that stray dogs may be used for new vaccine trials and challenge studies of vaccines, however, they must be quarantined and rehabilitated as per the guidelines of CPCSEA. In cases of the batch testing of established vaccines except for challenge studies, dogs coming to the clinics can be used for safety and/or potency trials.

Yours sincerely,

(Dr. S.K. Dutta)
Member Secretary (CPCSEA)
